

HARMAN WHEELS

Keep Moving... Effortlessly

About Us

I would like to introduce our company "HARMAN AUTOTEX ENTERPRISES" that has been in business of Manufacturing Castor & Trolley Wheels Since 2012.

We have been an established and popular company with an excellent track record for the best customer the quality and performance of "HARMAN" products has been proven over the years and a wide range of satisfied customers bears the testimony of the excellence and reputation of the products. The Company has a strong 'Brand Loyalty' in States of Punjab, Himachal Pradesh, Haryana, J&K (Jammu & Kashmir) and Southern states.

We are enclosing our products catalogues for your ready reference and would like to add here that in all the design "HARMAN" has distinguished itself by creating benchmark in that specific range of castors by incorporating new designs and providing a precisely engineered product which is reliable & dependable. Being well aware that material handling today is the only area in industry where human physical power is still used for conveying heavy loads, we try to leave no stone unturned to meet our motto "Keep Moving.....Effortlessly".

It will be a pleasure for us to be called for Techno commercial discussions with your end User department to evaluate suitability of our wide range of castors for your requirements and / or provide you with specific solutions to the problem areas that you might be having in material handling at your works.

We request you to formally register our name in the list of your approved suppliers and look forward to receipt of your valued inquiries and orders.

Thanking you and with kind regards,

Gaganpreet Singh Mokha
(Prop.)

Choosing the Perfect Matching of Castor as per According to Load on Trolley.

- (a) This Design is suitable for maximum manoeuvrability and for trolleys to be used at narrow places.
(b) Movement is much free and difficult to stop the trolley as it moves in any directions.

- (a) In this design placement of wheels is very much uniform and is most balanced.
(b) This is the most economical pattern.

- (a) This design become more useful if fixed castors Height is slightly more than Swivel Castors
(b) Moving of the Trolley remains better but chances of tilting of Trolley increases

- (a) This design is only recommendable for Extra heavy loads. Trolley can't be turned at right angle and required much space for maneuvering.
(b) Height of the fixed castors can be or can not be equally depends upon the load and load bearing capacity of Trolley
(c) This trolley design maximum use in Textile Industries. In this design trolley always move on Four wheels SW-02 & FX-02 for Smooth movement.
